# CONTENTS

## 1 WELCOME

Thank you .....	14
SQL + WordPress.....	14
Goals of the book.....	15
Who the book is for.....	15
What the book is .....	15
What the book is not .....	16
Requirements .....	16
Errata.....	16
Updates .....	16
How the book is organized .....	17

## 2 SQL OVERVIEW

What is SQL?.....	18
What can I do with SQL? .....	19

7 Golden rules for working with SQL.....	19
Golden Rule #1 : Make a backup copy .....	19
Golden Rule #2 : Only run safe queries .....	20
Golden Rule #3 : Test on local/private sites.....	20
Golden Rule #4 : Select data before making changes .....	20
Golden Rule #5 : Test results after making changes .....	20
Golden Rule #6 : Use the correct table prefix .....	20
Golden Rule #7 : Be mindful of syntax .....	21
Different ways to run SQL queries.....	21
Important note about table names.....	23
About the SQL recipes, syntax and whatnot.....	24
Useful resources .....	25

## WP POSTS & PAGES

Welcome to the posts table .....	26
Find any string in post content .....	26
Find all password-protected posts .....	27
Replace any string in post content .....	27
Replace old URL with new URL .....	28
Update URLs from HTTP to HTTPS.....	28
Update URLs for media only .....	29
Update URLs for links only .....	30
Replace weird characters in post content.....	31
Delete any string in post content .....	31
Remove unwanted shortcodes from post content.....	32
Find all posts with a specific post status.....	33
Delete all posts with a specific post status.....	34

Find and delete all posts with a specific post type.....	35
Delete post type and related metadata .....	36
Find & delete posts with empty excerpts.....	37
Find & delete posts with non-empty excerpts .....	37
Find & delete posts with empty content.....	38
Find & delete posts with non-empty content .....	38
Change post author .....	39
Get a list of all post authors .....	40
Get a summary of post type data .....	41
Batch/bulk delete old posts.....	43
Batch/bulk delete old posts and related metadata.....	43
Clean up menu items.....	44
Clean up nofollow attributes .....	45
Change posts to pages (or any post type).....	47
Find recently edited posts .....	47
Find all posts from specific author .....	48

## 4 WP POST META

About the post metadata table.....	50
Preview post metadata .....	51
Get metadata based on key and/or value .....	51
Get metadata based on meta key .....	52
Get metadata based on meta value .....	53
Get metadata based on meta key & value .....	53
Get metadata via wildcard match .....	54
Find & delete empty or non-empty metadata.....	55
Get metadata with multiple possible meta keys .....	56

Get all posts that have specific metadata.....	56
Delete metadata based on key and/or value .....	59
Change key names for post metadata .....	59
Change the value of post metadata .....	60
View all hidden custom fields.....	60
Batch delete posts based on metadata .....	62
Find and delete orphaned metadata .....	64
Clean up <code>_edit_</code> metadata .....	66
Add new meta field to all posts .....	68
Find posts that have a missing meta field .....	70

## 5 WP COMMENTS

The two tables.....	72
Select comments by type.....	73
Select comments by author .....	74
Select comments by email address.....	74
Get a list of comment email addresses .....	75
Select comments by IP address .....	75
Find all comments that contain a specific word.....	76
Replace comment author URL.....	77
Replace comment author email address.....	77
Replace comment author IP address .....	78
Replace words in comments .....	79
Disable (or enable) comments & pingbacks .....	80
Change comment status based on post status .....	82
Close comments on older posts .....	84
Delete all pingbacks & trackbacks .....	86

Batch delete spam & trash comments.....	87
Delete all comments from a specific URL.....	89
Delete comments from a specific email address.....	90
Delete comments from a specific IP address .....	91

Find posts with the most comments.....	93
Find posts with the most spam .....	94
Find and delete orphaned comment metadata.....	94
Clean up the commentmeta table .....	95

## WP USERS

It takes two.....	96
Get the total number of users.....	97
Show all users .....	99
Show all users with email address and ID.....	99
Find user by username .....	101
Find user by ID .....	101
Change any username .....	102
Find all users by role.....	102
Display all user roles (basic) .....	103
Display all user roles (advanced) .....	105
Change any email address.....	106
Change any user ID .....	107
Update any user metadata.....	108
Find duplicate email addresses.....	110
Clean up email addresses .....	111
Delete any user .....	112

Delete orphaned user metadata .....	112
List all unique meta keys.....	114
Set new password for any user .....	114
Add a new user.....	115
Step 1: Add a new user to the wp_users table .....	116
Step 2: Add wp_capabilities meta to the wp_usermeta table .....	117
Step 3: Add wp_user_level meta to the wp_usermeta table .....	118

## WP TAXONOMIES

Advanced wizardry.....	120
Select term ID based on term name .....	121
Get all taxonomy terms for any post .....	122
Get all posts that have specific taxonomy term .....	123
Cleaner results .....	123
Include only posts .....	124
Order by whatever.....	124
Get all posts of a specific taxonomy.....	125
Select all taxonomy terms .....	125
Select all posts and related terms .....	127
Selecting posts with different set of taxonomies.....	128
Selecting different post types and statuses.....	128
Including more information in the results .....	129
Customize the separator for grouped results.....	131
Move terms to another taxonomy.....	132

Add term to all posts .....	133
Step 1: Add the term to all posts .....	133
Step 2: Add the post count .....	133
Add term to posts that have an existing term.....	134
Step 1: Add the term to all posts .....	134
Step 2: Add the post count .....	134
Find unused/orphaned terms.....	135
Delete unused terms for any taxonomy.....	136
Delete unused terms for all taxonomies.....	137
Delete all posts that have specific taxonomy term .....	138
Step 1: SELECT query .....	138
Step 2: DELETE query.....	139

## WP OPTIONS

The WP options table .....	140
Select any option .....	141
Select X number of options.....	141
Update any option .....	142
Update multiple options.....	142
Add a new option.....	143
Delete an option.....	144
Select all autoload options .....	145
Get size and row count of all autoload options .....	145
Change autoload values.....	146
Find all transients .....	147

Delete all transients ..... 148

Get size and row count for all transients..... 149

Get all autoload transients ..... 149

Deactivate all plugins ..... 150

Get all widget data ..... 151

Switch WordPress themes ..... 152

## MORE RECIPES

Going further..... 154

Optimize any table..... 154

    Important note about optimizing tables ..... 155

Optimize all tables ..... 155

    Step 1: Get a list of optimize commands..... 156

    Step 2: Run the commands ..... 156

Get version number and database type ..... 157

Get database size ..... 157

Get size of all databases..... 158

Get size of any table ..... 159

Show all table names..... 160

Get size of all tables ..... 161

Get detailed information about all tables..... 162

Get row count and data size for any table ..... 162

Create a new table ..... 164

    Example: create new table ..... 169

View a table ..... 170

Empty or truncate a table (delete rows) .....	170
Delete a table .....	171
Convert table from MyISAM to InnoDB .....	172
Rename or replace a table .....	172
Change table prefix .....	173
Step 1: Build the query .....	174
Step 2: Rename the tables.....	175
Step 3: Clean up.....	175
Rename a column .....	176
Make a backup of any table.....	177
Restore from backup .....	179
Run SQL via WordPress + PHP .....	179
Prepare queries (escape & sanitize) .....	181
Select a variable .....	182
Select a row .....	184
Select a column.....	184
Select generic results.....	185
Onward.. .....	186

## OPTIMIZE WP

One for the road.....	188
Update URLs from HTTP to HTTPS.....	189
Replace weird characters in post content.....	189
Remove unwanted shortcodes from post content.....	190
Delete revision posts and related metadata .....	190
Find & delete posts with empty excerpts.....	191

Find & delete posts with empty content.....	191
Batch/bulk delete old posts.....	192
Clean up menu items.....	192
Find & delete empty metadata.....	193
Find and delete orphaned metadata .....	194
Clean up <code>_edit_</code> metadata .....	195
Replace comment author IP address .....	196
Disable (or enable) comments & pingbacks .....	196
Close comments on older posts .....	198
Delete all pingbacks & trackbacks .....	199
Batch delete spam & trash comments.....	200
Delete unwanted user-agent data.....	201
Find and delete orphaned comment metadata.....	201
Clean up the <code>commentmeta</code> table .....	202
Find duplicate email addresses.....	202
Clean up email addresses.....	203
Delete orphaned user metadata .....	204
Delete unused terms for all taxonomies.....	205
Delete all transients .....	206
Optimize all tables .....	207
Going further with optimization .....	208
Until next time.. .....	209
